

The image shows a computer monitor displaying the JASCI software configurator interface. The interface is titled "Configurator" and has a navigation bar at the top with menu items: 1 - INBOUND, 2 - INVENTORY, 3 - OUTBOUND, 4 - PUTWALL, 5 - LOOKUPS, 6 - LABOR, 7 - DOCK, 8 - MOBILE, 9 - WCS, BILLING 3PL, REPORTS, and SETUP. The main area is divided into a "Task" configuration panel on the left and a "Workflow" diagram in the center. The "Task" panel includes fields for Execution Sequence Name (Putaway), Execution Type (VISUAL Execution Type), Execution Device (MOBILE), Execution Group (PUTAWAY), Description Short (Putaway), Description Long (Putaway), Menu Name (Putaway), Application (WMS), and Task (Putaway). The "Workflow" diagram shows a sequence of steps: START (green circle), Show Menu (blue rectangle), New Putaway (grey circle), Clear History (blue rectangle), Get Work By LPN (blue rectangle), Putaway (grey circle), and Get Work Line (blue rectangle). A decision diamond labeled "IF NO LINE (RETURN...)" follows. A blue arrow points from the workflow diagram to a Zebra mobile device on the right. The mobile device screen displays a pick list with the following information: "Pick Cluster All Phil B", "Location: APD250-09H1", "Product: FDRDG30021", "19 Ford Mustang GT350 Hdlight Pair", "Quantity: 4", "Next Location: APG127-08C3", "Total QTY to Pick: 4", "Cart Slot: 1 QTY: 4", "Scan LPN: 9037482251", and buttons for "Cut" and "Exit". A text box with the text "Workflow creates mobile experience" is positioned above the mobile device.

Workflow Technology

Industries first patented workflow technology

Basic warehouse logistics principles dictate that optimized workflow can dramatically reduce labor costs, increase inventory accuracy and shorten order fulfillment cycles, improving efficiency.

Dynamic Workflow Technology

Powered by SmartTask Workflow

SmartTask is the industry's first workflow designer using a drag and drop micro-services toolkit to automate wall to wall fulfillment in the warehouse, directly within JASCI, our cloud-based software logistics platform. Workflows can be easily tailored without expensive and time-consuming coding projects to optimize warehouse process.

Most warehouses manually determine workflow and, in many cases, lack basic process documentation. Market changes demand that businesses have the flexibility to enable new business process to maintain or support growth. Operations are challenged to meet these demands due the complexity of changing software and time consuming to deliver.

- ✓ Flexibility to meet new business requirements
- ✓ Easier to implement
- ✓ Easier to optimize process
- ✓ Built-in labor management
- ✓ Automation smart with Robotics & MHE equipment

Gartner

Gartner® Names JASCI in mid-market Quadrant™ for Warehouse Management Systems

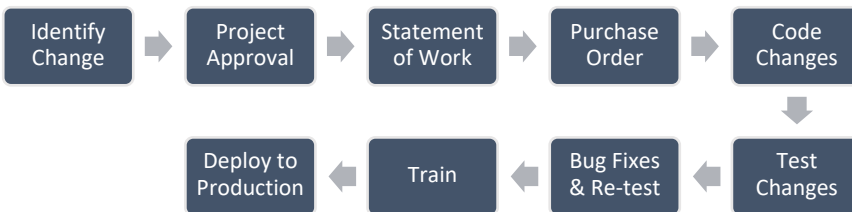

What is a SmartTask Workflow

With JASCI dynamic workflow, customers have the flexibility to document and enable new business process to maintain or support growth.

JASCI invented workflow micro-services to make it easier to implement, optimize and adapt to changes as needed. A micro-service are steps within a workflow, that defines a particular process or instruction to follow. A sequence of micro-services defines a workflow. Micro-services eliminates expensive and time-consuming coding projects, as each micro-service is a smaller executable program within JASCI.

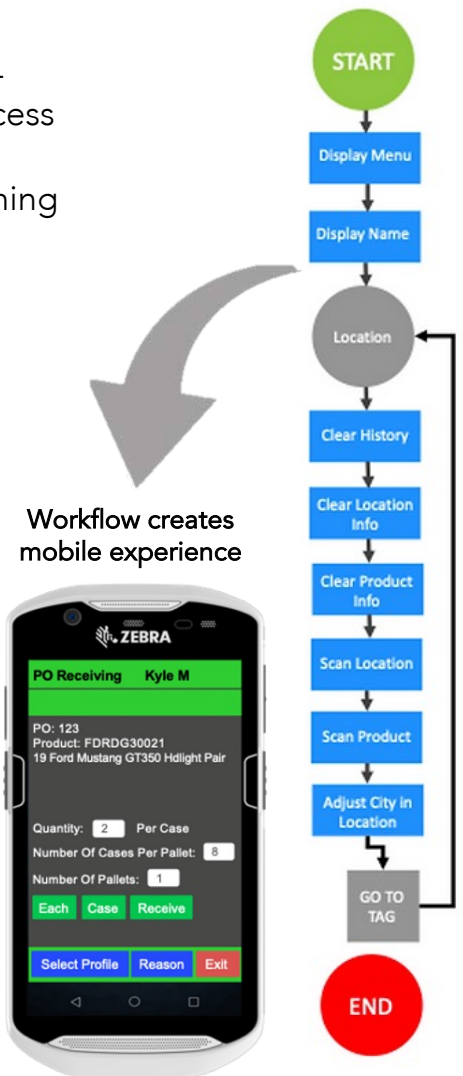

Old Way

Time consuming and expensive process

New Way

Modern micro-services makes changes easy

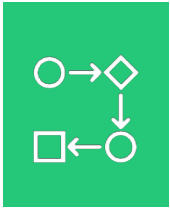

Workflow creates mobile experience

Workflow Templates

Workflow templates are best practice workflows pre-designed to optimize warehouse process from inbound to outbound. Workflows are modular, and can be used as needed.

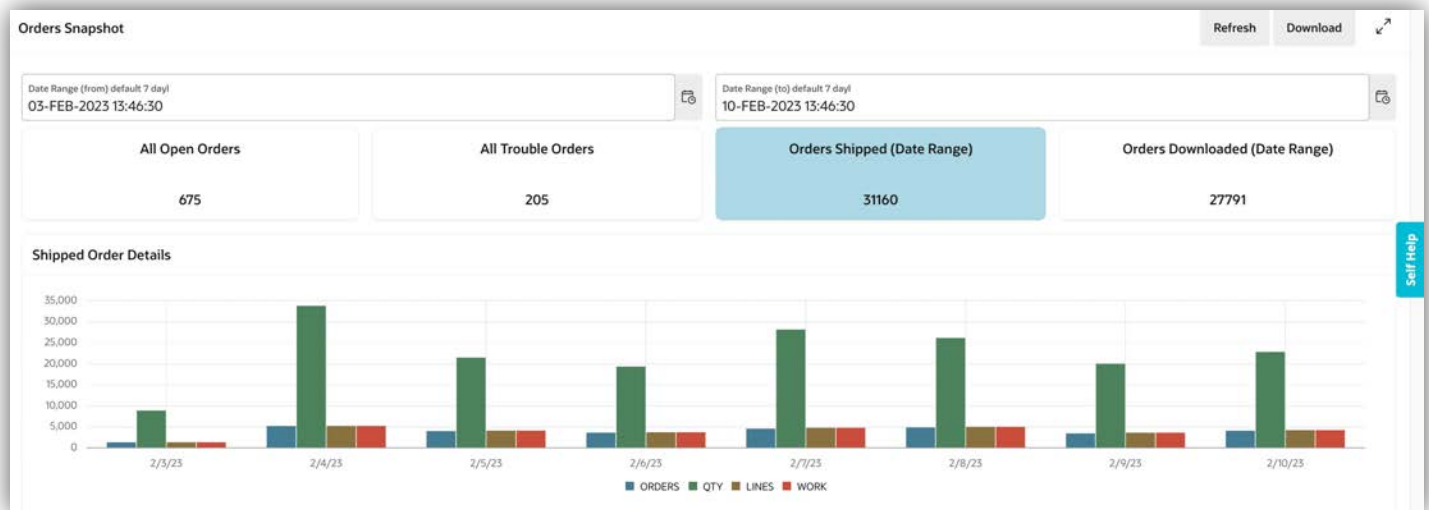

Our growing library of templates provides a head-start to quicker implementations and efficiency gains for a quicker ROI. Workflow templates are optimized for 3PL, Ecommerce, Consumer Goods, Manufacturing and Retail logistics.

<p>Receiving</p> <p>Purchase orders, ASN's, bling receipts, appointments, inspection, audits, cross-dock</p>	<p>Returns</p> <p>Returns processing. Process RMA's faster with configurable dispositions. Return to stock</p>	<p>Put-Away</p> <p>Smart decision logic directs put-away workflows optimize the process with speed, accuracy</p>	<p>Dynamic Slotting</p> <p>Intelligent dynamic slotting technology optimizes space, speed & accuracy</p>
<p>Inventory</p> <p>Manage all inventory & locations with multiple UOM, lot, serial and date controls.</p>	<p>Replenishment</p> <p>Replenishment features with real-time min/max triggers, days of supply & UOM</p>	<p>Location Audits</p> <p>Real-time automated inventory audits without manual decisions</p>	<p>Cycle Counts</p> <p>Directed cycle counting to auto generate directed cycle counts throughout the warehouse</p>
<p>Orders</p> <p>Order management capabilities to manage, prioritize, change & cancel orders across locations</p>	<p>Allocation</p> <p>Configurable allocation rules of inventory across the warehouse for orders & backorders</p>	<p>Cartonization</p> <p>Intelligently determines size of orders for perfect fit to cartons, totes and pallets in real-time</p>	<p>Streaming</p> <p>AI software prioritizes & optimize orders fulfillment without manual decisions</p>
<p>Routes</p> <p>For B2B operations, JASCI smartly groups orders to routes and generates assignments</p>	<p>Order Picking</p> <p>Smartly automates order picking with multiple picking methodologies</p>	<p>Put-Walls</p> <p>Wizards for configuring put-walls to sort & aggregate batch picked items</p>	<p>Put-to-Pallet</p> <p>Wizards for configuring put-pallets to sort & aggregate batch picked cases</p>
<p>Packing</p> <p>Pack orders using advance cartonization logic. Pack single item and multi-item orders</p>	<p>Parcel Shipping</p> <p>Integrated parcel carrier shipping & rate shopping carriers in real-time</p>	<p>LTL Shipping</p> <p>Connectors for shipping on LTL & FTL. Rate shop carriers with your negotiated rates</p>	<p>Dock</p> <p>Visual dock management displaying staging, dock doors and trailers/trucks</p>
<p>Kitting & Sets</p> <p>Capabilities to create and perform kitting and sets functions within JASCI</p>	<p>VAS Logic</p> <p>Configurable workflows for value added services for compliance functions</p>	<p>Labels & BOL</p> <p>Compliance label capability and standardized bill of lading documents</p>	<p>Labor</p> <p>Built-in labor management with gamification. Real-time leaderboards & reporting</p>

Workflow Performance & Reporting

As SmartTask workflows are utilized, performance metrics are gathered in real-time for labor, robotics and process within the warehouse.

Outbound Reporting

- Outbound Dashboard
- Open Picks- All
- Open Picks by Work Type
- Open Picks by Work Zone
- Open Picks by Zone and Type
- Picked not Shipped - By Work Type
- Shipments - Total
- Shipments by Work Type
- Shipments by Carrier
- Picked not Shipped - By Sales Order
- Shipments with Product Details
- Freight Detail Report

JASCI has created the industry's first embedded data warehouse within our application to make reporting easier than ever. A full data repository that is updated within 10 seconds of all transactions in the platform.

Dozens of best practice reports and dashboards to provide 360 view of your operations, performance and data. Reporting from inbound to outbound, including labor management.

Customers can customize reports, make them private or public. Share reports via email or download in multiple formats. Authority and settings to ensure data is secure.
