Parcel Shipping Features

Pack Stations
Packing station technology for single and multi-line orders, with multiple pack methods.

Multi-Line Packing
Pack multi-line orders in a single process that packs and prints parcel carrier labels.

Carrier Rate Shopping
Real-time parcel carrier rate shopping to ship orders with the best rates.

Singles Packing
Pack batched single orders in a single process that packs and prints parcel carrier labels.

Parcel Carrier Labels
Print carrier compliant labels to ship product globally. Print on standard barcode printers.

Auto-Baggers
Incorporate auto baggers to make the process quicker for packing multi-line and single item orders.

Cartonization Logic
Matches orders to carton and bag sizes based on dimensions of products and size of order.

Load & Close Truck
Process for loading and closing parcel carrier shipments along with shipment verifications.

Up-Charge Shipments
The ability to leverage your shipping rates while providing customers a financial benefit.

Labor Management
Full labor management and process reporting so you can manage costs and throughput.

Parcel Shipping Analytics

Monitor your shipments and costs with JASCI's next generation reporting capabilities. Compare costs over time ranges and across carriers.

JASCI has created the industry's first embedded data warehouse within our application to make reporting easier than ever. A full data repository that is updated within 10 seconds of all transactions in the platform.

Dozens pf best practice reports and dashboards to provide 360 view of your operations, performance and data. Reporting from inbound to outbound, including labor management.

Customers can customize reports, make them private or public. Share reports via email or download in multiple formats. Authority and settings to ensure data is secure.
